

Eurocruiser Titanium

EUROCRUISER
Take Your Home With You

Aerodynamics

Why does nearly every semi on the road have a fibreglass cap mounted on top of the trucks roof? Improved aerodynamics, the cap extends the aerodynamic profile upwards directing air-flow from the front of the truck and over the roof of the trailer. The Eurocruiser Titanium front cap design works the same way making a huge difference in towability and also in fuel economy. The patented TI technology allows you to cut through the air by transitioning the flow of air from the truck cab directly over the top of the 5th Wheel.

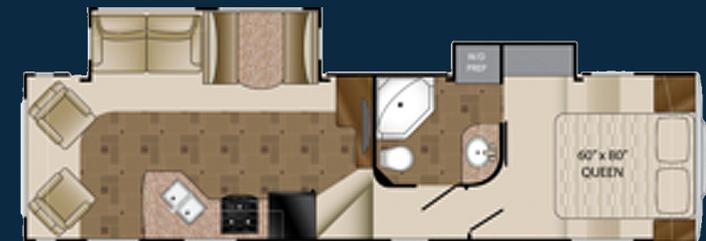

Maneuverability

In addition to superior aerodynamics the Titanium Edition cap integrated with the unique frame design can achieve 88 turning virtually eliminating the problems typically associated with towing a fifth wheel with a short-bed, extended-cab truck - all without having to invest in expensive and clumsy slider hitch systems.
